

## Application Performance Monitoring - saving time and improving productivity

### Architecture overview

Assure provide enterprise-class end-user, application and network performance management services. Comprising FarrPoint bespoke configuration, Assure deliver visibility, analytics and insight with tailored services and reporting utilising embedded Riverbed technology, empowering IT departments to innovate and differentiate from the competition.

Our Application Performance Monitoring services drastically reduce the time and effort required to develop, deploy and ensure application performance and are part of our range of bespoke solutions to satisfy the needs of virtually any part of an IT estate or an entire enterprise environment.

Our range of Application Performance Monitoring services provide a step change and offer a complete platform for location-independent computing monitoring available today.

The precise and timely information allows service providers and internal IT departments to ensure applications perform as expected, data is always available when needed and performance issues are detected and fixed before end users even notice.

Assure services also offer bullet-proof capacity planning information meaning related business cases are precise, accurate and do not fall foul of either over- or underspend.
